LED PROFILES
From manufacture to warehouse

Long experience in the field of distribution and sale of LED lights have lead us to the effort to deliver to our customers unique products – LED profiles.

These profiles, made of aluminium, are an inseparable part of LED strips. Their main function is cooling the LED strips and extending their life span, while adding a modern look to the whole installation.

Our profiles fulfil all technical requirements, as well as the demands of our customers in terms of quality and variability in the everyday life.

Since our company focuses solely on the production and wholesale distribution of LED profiles, we offer our customers unique services tailored to the customer's needs, as well as highly competitive prices.

LEDprofiles s.r.o. is based in Slovakia, in the centre of Europe, which allows us to distribute within the whole European Union, while providing short delivery periods with low shipping costs.

Our vision is to become your long term and stable business partner with a wide range of LED profiles and various accessories.
